

Video reporting on missions using mobile phones and *entry-level* cameras

The prompter

Or teleprompter, is a device that displays and scrolls a script (text) so a speaker can read this text while looking directly at a camera (at the viewers). A mobile phone or a camera can be used to record.

The mobile phone or camera records through a transparent glass, and (of course) the text never appears in the video production.

Elgato prompter

Why use a promoter?

Reading your speech, without appearing that you are reading it.
Your viewers will “assume” that you are not reading.

Maintaining “eye contact” with your viewers is so more natural.

Improving non-verbal language is an important part of a speech.

Not having to look at cardboard next to the camera, not to look down at notes, or turning pages, and, more importantly, not having to improvise...

You will not say things you should not say, or will not forget things you want to say.

Pace is a key component in a video presentation. With a prompter you can control the pace of your speech.

I saw acceptable results by someone using a prompter software on a tablet, positioned just below the lens, supported by a music stand.

In the service of our Lord,

Pierre
